LAB PEMROGRAMAN BERORIENTASI OBJEK 6 <TODO 2>

Cari satu class bawaan dari Java. Gunakan method yang tersedia pada class tersebut!

=

Aku memilih String.

Method yang ku gunakan adalah memformat String dengan format tertentu.

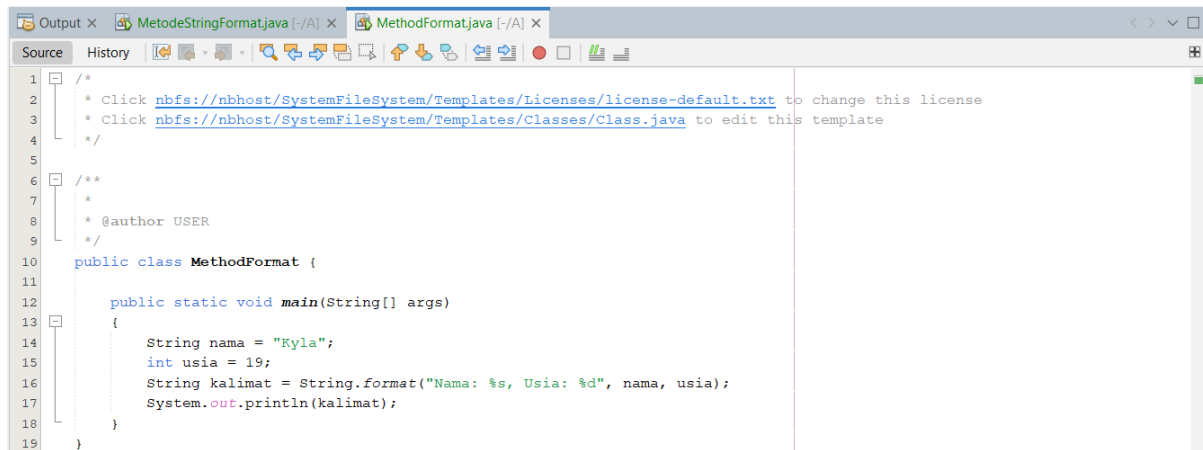

Contoh :

```
String nama = "Kyla";
```

```
int usia = 19;
```

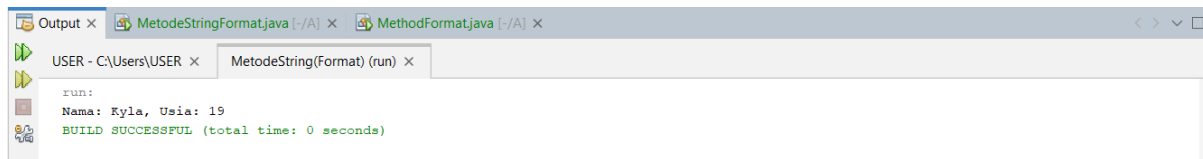

```
String kalimat = String.format("Nama: %s, Usia: %d", nama, usia);
```

```
System.out.println(kalimat);
```

```
1  /**
2   * Click nbfs://nbhost/SystemFileSystem/Templates/Licenses/license-default.txt to change this license
3   * Click nbfs://nbhost/SystemFileSystem/Templates/Classes/Class.java to edit this template
4   */
5
6  /**
7   *
8   * @author USER
9   */
10 public class MethodFormat {
11
12     public static void main(String[] args)
13     {
14         String nama = "Kyla";
15         int usia = 19;
16         String kalimat = String.format("Nama: %s, Usia: %d", nama, usia);
17         System.out.println(kalimat);
18     }
19 }
```

Output :

```
USER - C:\Users\USER x MetodeString(Format) (run) x
run:
Nama: Kyla, Usia: 19
BUILD SUCCESSFUL (total time: 0 seconds)
```
